Installation Guide for the Lucid Exact Thin Client

## Contents

<u>1.</u>	PRE-INSTALLATION NOTES	3
2. In	NSTALLING LASS THIN CLIENT MSI ON EACH WORKSTATION	4

#### 1. Pre-installation notes

At this stage of the installation process for LASS for Networks, it is assumed that you have gone through the procedures in GUIDE1 and GUIDE 2 which covers the SQL Server and the main LASS application installation on the server.

#### REMINDER

LASS uses a thin client model for deployment on a network.

On all workstations which will run LASS from a shortcut, you will need to install one or two small msi files and you will also need to set up a share on the server and a shortcut on each workstation.

#### There are 4 steps to follow in this Guide

**1**. Check that *SQL Server Native Client 10.0* driver is already installed on the workstation. If it is not, install from the *LASS* CD.

- **2**. Install *LASS* Thin Client software.
- 3. Create a Share on the server to the folder \LASS 8-11 Network or \LASS 11-15 Network \

**4**. Create shortcuts as required within the Share and drag them to the workstation desktop.

See Chapter 2 below for step-by-step details:

# 2. Installing LASS Thin Client msi on each workstation

Before you start, launch the LASS CD on the workstation and go to the appropriate menu page on the Setup menu (see picture below) and look at the message displayed in the information box (arrowed in red) which tells you whether you have the correct ADO driver installed on your workstations.

1. If you don't have the driver called *SQL Server Native Client 10.0* then please ensure that you install it on the workstation either directly from the CD (see the 32bit and 64 bit driver install options below the slideshow) or by copying the driver from the CD and deploying the 'msi'.

On the CD the full path to the 32 bit and 64 bit Native Client drivers are:

```
ROOT:\SQLNCLx32\sqlncli.msi
ROOT:\SQLNCLx64\sqlncli.msi
```

Having dealt with the Native Client driver, the next step is to install the thin client package which installs essential dll and ocx files onto workstations.
 You can either install directly from the CD using the option 'Install the LASS thin client software' or by copying the driver from the CD and deploying the 'msi'.

On the CD the full path to the system client msi is:

ROOT:\Workstation Setup\Lucid Universal Thin Client.msi

3. Now move your attention to the server and create a share (using *Advanced Sharing*) on the root of the application folder *LASS 8-11 Network*\ or *LASS 11-15 Network*\

Read permissions are sufficient for ordinary users on this share. If you intend to run the Reports and Admin module your share needs to have *Full Control* permissions on the folder called *Archives* which is used as a repository by the database archiving options.

4. On each workstation you need to make a short cut to the test module application file LJUNTv603.exe (LASS 8-11) LSECTv603.exe (LASS 11-15) on the share you have just created on the server.

First, browse to the share you created in step 3 using: *Computer > Network > COMPUTER* (see below)

Open the Share and locate the two LASS application executable files (see picture below). Right mouse click over the file LJUNTv603.exe or LSECTv603.exe and select *Create Shortcut*. Now drag the shortcut to your workstation desktop and rename it as you wish.

To create a shortcut to the reports and admin module (which should only be available to teachers or administrators) carry out the same procedure on the file: LJUNAv603.exe (LASS 8-11) LSECAv603.exe (LASS 11-15)

The picture below shows the process of creating shortcuts and sending them to the desktop .

Finally, log on as a typical User and ensure the shortcut is available to that User and attempt to run the LASS test application from it.

If you have a shortcut to the *Reports and Admin* module, after creating the shortcut on the workstation, once *LASS* is installed and working, go to the *Archiving* screen, select **Save** (archive) the current database and you should see a browser box similar to that below. Notice that you are taken directly to the *Archives* folder on the server.
